

## **IMPACT ANALYSIS AND FINANCIAL REPORT**

### **IMPACT ANALYSIS**

Since November 2020, Tulare County has been using Dominion Democracy Suite 5.2 Voting System to tabulate ballots. The Image Cast Central Scanner is a high speed ballot scanner that accepts every precinct ballot type for each election. Neither the ballot nor the precinct counter capacity will be affected by the consolidation.

Speed of reporting election night results will not be affected by the additional contest. The consolidation will have an insignificant impact on the length of the time for the official canvass and reconciliation of records.

### **COST EFFECTIVENESS**

No regularly scheduled Federal, State or County elections are held in the odd-numbered years when the East Orosi Community Services District is currently scheduled to elect the Board Members. No other Districts in the area currently have odd-numbered year elections.

None of these districts are required to have an election if the nominees are equal to or less than the vacancies; therefore, districts will have fewer districts with which they share election costs.

Consolidation with the Statewide General Election should save the district money because the County will always share a portion of the total election cost. Additionally, a portion of the election costs will potentially be shared with the many local districts with even year general elections.

Any costs to the County because of the consolidation will be offset by reimbursement revenue received from the district for its prorated share of the election costs.
